

Responsible Sourcing Statement

The Tata Steel vision is to be the global steel benchmark for value creation and corporate citizenship. In support of this vision, the core Tata values are applied throughout the organisation. Furthermore, we seek to apply the same principles throughout our supply chains.

We recognise the importance of identifying risk in the supply chain, taking a due diligence approach and have in place a Responsible Procurement Policy, which covers Health & safety; Fair business practices; Environmental protection; Human rights and Local community development.

Tata Steel Europe's products are BES 6001 certified, which demonstrates through 3rd party assurance that the constituent materials have been responsibly sourced. Furthermore, Tata Steel in India and Europe collectively has been identified as a global leader for engaging with its suppliers on climate change, being awarded a position in the top 3% of organisations assessed by CDP on their Supplier Engagement Leaderboard.

We continue to examine options and the merits of other due diligence approaches and certification schemes for responsible sourcing such as ResponsibleSteel™, to ensure that Tata Steel Europe remain at the forefront of efforts to deliver supply chain transparency. We will continue to drive that transparency and keep our stakeholders informed of our approaches.
